

Bewertung – Daily Self-Evaluation & Discipline Tracker

"What gets measured, gets managed."

Overview

Bewertung (German for *evaluation*) is a personal discipline tracker built with Flutter. Each day you rate yourself: what good habits did you follow, and which negative behaviors did you fall into? The app calculates a weighted score so you can see — in hard numbers — how well you lived up to your own standards.

This is **not** a to-do list. You won't find projects, due dates, or team collaboration here. Bewertung is a private mirror: a system for honest self-assessment that rewards consistent good behavior and penalizes avoidable slip-ups.

The Idea Behind It

Most productivity apps reward completion. Bewertung rewards *character*.

The core insight is simple: real self-improvement requires tracking two sides of the coin simultaneously — the things you intend to do and the things you intend to *stop* doing. Checking off tasks is easy; confronting your negative patterns honestly is harder, and far more valuable.

Every task and habit carries a **weight** you define yourself. Skipping prayer or exercise might cost you more points than missing a minor habit — because you decide what matters. At the end of each day, the app computes a transparent score:

```
Score = (completed positive tasks × their weights) - (negative habit occurrences × their weights)
Percentage = (score / max possible positive score) × 100
```

Over time, the calendar and statistics screens paint a clear picture of your consistency. Green days become the goal, and the streaks — or the gaps — speak for themselves.

This feedback loop promotes **awareness before judgment**. You are not graded by anyone else. You are graded by your own declared values.

Features

Core Tracking

- **Positive tasks** — define habits and behaviors you want to perform (e.g., exercise, reading, prayer)
- **Negative habits** — define forbidden or undesired actions you want to avoid
- **Custom weight per item** — assign importance so not all habits carry equal impact on your score

- **Target count per item** — set how many times a task should be done in a given period
- **Frequency modes** — track items on a **daily**, **weekly**, or **monthly** cycle
- **Active / inactive toggle** — pause items without deleting them

Daily Evaluation

- Open any past or present day from the calendar to log your counts
- Live score preview updates instantly as you enter data (positive points, negative points, raw score, percentage)
- Save or update any day's evaluation at any time

Calendar View

- Full interactive calendar showing every rated day with a color-coded dot
 -  ≥ **80%** — Excellent
 -  ≥ **50%** — Medium
 -  ≥ **0%** — Weak
 -  < **0%** — Negative (negative habits outweighed the positives)
- Tap any past day to open its detail page

Statistics

- Selectable date range for trend analysis
- **Daily score chart** — raw score line across the chosen period
- **Per-item count chart** — filter by specific tasks, habits, or categories
- **Category statistics** — aggregate performance grouped by category

Categories

- Create color-coded categories to organize tasks and habits (e.g., Health, Worship, Learning)
- Filter statistics by category

Settings & Data

- **Language support** — English and Arabic (with full RTL layout)
- **JSON backup & restore** — export all your data to a file and import it on any device
- Backup includes full rollback on import failure to protect existing data
- Built-in **User Guide** accessible from settings

 What Makes This Different

Feature	Generic To-Do App	Bewertung
Task completion		
Negative behavior tracking		
Weighted importance		
Daily percentage score		

Feature	Generic To-Do App	Bewertung
Calendar color heatmap	✗	✓
Discipline-focused design	✗	✓

The decisive difference is the **negative habit system**. A day where you completed every task but also indulged in several forbidden behaviors is *not* a great day — and Bewertung's score will reflect that. This honest accounting is what separates a self-evaluation tool from a simple checklist.

Tech Stack

Technology	Role
Flutter / Dart	Cross-platform UI framework — one codebase for Android, iOS, Windows, Linux, macOS, and Web
Flutter Riverpod	State management — providers expose reactive streams of tasks, habits, and entries; UI rebuilds only when data changes
Hive + hive_flutter	Local key-value storage — fast, lightweight, no SQL overhead; all data lives on-device
table_calendar	Interactive calendar widget with custom day builders for color-coded rating dots
fl_chart	Line and bar charts in the statistics screen
flutter_localizations + intl	Full English / Arabic localization including RTL support
file_picker + share_plus	JSON backup export and cross-platform file sharing
path_provider	Platform-aware temporary directory for backup files
uuid	Collision-resistant IDs for all persisted entities

Installation

Prerequisites: Flutter SDK $\geq$ 3.9.2, Dart SDK $\geq$ 3.9.2

```
# 1. Clone the repository
git clone https://github.com/housnizalam/bewertung.git
```

`cd` bewertung

```
# 2. Install dependencies
flutter pub get
```

```
# 3. Run on a connected device or emulator
flutter run
```

```
# 4. Build a release APK
flutter build apk --release
```

Download

Pre-built binaries will be available in [Releases](#) once the first stable version is tagged.

Project Structure

```
lib/
├── core/           # App-wide constants, theme, and helpers
├── features/
│   ├── calendar/  # Monthly calendar with color-coded score dots
│   ├── categories/ # Category management screen
│   ├── day/       # Day detail page – log counts, preview score
│   ├── manage/    # Create and edit tasks and habits
│   ├── settings/  # Language, backup/restore, user guide
│   └── statistics/ # Trend charts and date-range analysis
├── l10n/          # English and Arabic localization strings
├── models/        # Pure data classes (PositiveTask, NegativeHabit,
DayEntry, etc.)
├── navigation/    # Bottom navigation and routing
├── providers/     # Riverpod providers for state and business logic
├── shared/        # Reusable widgets (e.g., Pressable3DButton)
└── storage/       # Hive service and JSON backup/restore logic
```

Future Improvements

- **Reminders & notifications** — daily prompt at a chosen time to complete the evaluation
- **Streak tracking** — visualize consecutive days above a score threshold
- **Cloud sync** — optional backup to a personal cloud drive (Google Drive, iCloud)
- **Advanced analytics** — rolling averages, weekly/monthly summaries, trend detection
- **Custom scoring formulas** — allow percentage caps or bonus multipliers per habit
- **Widgets** — home-screen widget showing today's current score
- **Export to CSV / PDF** — for users who want to analyze data in spreadsheets

About the Developer

This app was built by **Housni Zalam** as a personal project to solve a real problem: the lack of tools that take *negative behavior* as seriously as positive habits in daily self-evaluation. Rather than another habit tracker that only rewards streaks, Bewertung treats discipline as a two-sided ledger — rewarding good actions and honestly penalizing failures. The result is a cleaner, more honest picture of how you actually live each day.
